

Ahmet Bakircan

Software Engineer

English Language Teaching graduate who pivoted into software engineering. Leveraging strong English proficiency and self-directed learning, I transitioned into project-based software development at 42 Kocaeli. I thrive in fast-learning environments, enjoy building real systems, and focus on turning complex problems into working solutions.

PERSONAL PROJECTS

PeerFlow (2025)

- PeerFlow — Decentralized Collaboration Platform on Sui, 1st Place Winner, 42 Kocaeli × Sui Hackathon.
- A decentralized collaboration and freelance platform built on Sui using Move smart contracts and a React frontend.
- <https://github.com/Myxoceph/SUI-Hackathon>

MiniShell — C / Unix Systems Programming (42 Network) (2024)

- Developed a simplified Bash-like shell in C with support for pipes, redirections, and signal handling.
- Implemented process control using fork/execve and file descriptor manipulation.
- <https://github.com/Myxoceph/minishell>

ft_irc — C++ Network Programming Project (42 Network) (2025)

- Developed a concurrent IRC server supporting multiple clients and channels.
- Implemented socket-based communication and protocol-level command handling.
- https://github.com/Myxoceph/ft_irc
